

DogeRocket Whitepaper

Executive Summary

DogeRocket (DRKT) is a decentralized ERC20 token on the Polygon network, combining meme coin appeal with robust staking mechanics. With a total supply of **1 billion DRKT**, **40%** is allocated to a reward pool funded by a **2% tax on unstakes**, offering dynamic APY from **5.8% to 347.2%**, with up to **300%** achievable. The **30% locked pool** and **20% vested allocation** ensure sustainability over **10 periods**. **10%** is minted to the owner at launch for initial liquidity.

The IDO launches on **November 1, 2025**, on **Trustpad, Tokonomo, UNCX, and DuckSTARTER** to raise funds for marketing and growth. DogeRocket introduces **DogeDAO** for community governance, positioning DRKT as a high-yield meme token.

Introduction

Meme coins have gained traction through viral marketing, but many lack utility. **DogeRocket** addresses this by integrating staking rewards into its tokenomics, creating a self-sustaining ecosystem. Built on **Polygon** for low fees, DRKT offers accessible DeFi staking with meme coin excitement.

Tokenomics

Supply and Distribution

- **Total Supply: 1,000,000,000 DRKT**
- **Owner (10%): 100,000,000 DRKT** - For liquidity and operations.
- **Reward Pool (40%): 400,000,000 DRKT** - Funds staking, replenished by 2% unstake tax.
- **Locked Pool (30%): 300,000,000 DRKT** - Vested over 10 annual periods, added to reward pool.
- **Vested Allocation (20%): 200,000,000 DRKT** - Vested over 10 annual periods, claimable by owner.

Tax Mechanism

A **2% tax** applies to unstakes, with **100%** directed to the reward pool. No tax on stakes, transfers, or claims.

Vesting Schedule

Both locked and vested allocations vest over **10 years**, with claims starting after a **1-year cliff (365 days)**. Each period releases **1/10th** of the allocation.

Staking Mechanics

Core Features

- **Minimum Stake: 100 DRKT**
- **Maximum Stake: 1,000,000 DRKT**
- **Stake Duration:** Minimum **14 days**, maximum **365 days**
- **Cooldown: 24 hours** between actions
- **Withdraw Fee: 2%** (sent to reward pool)
- **Claim Window: 1095 days (3 years)** for pending rewards

Reward Calculation

Rewards are dynamic, based on total staked and reward pool:

- **Base Rate: 159 to 95,130**
- **APY: 5.8% to 347.2%**, with **300%** achievable
- **Formula:** $\text{Accrued} = (\text{stakeAmount} * \text{duration} * \text{dynamicRate}) / \text{DENOMINATOR}$

Stakers earn proportional rewards, with compounding encouraged.

DogeDAO Governance

DogeDAO governs the **30% locked allocation**, enabling community proposals on usage (e.g., airdrops). Post-IDO, token holders vote, with:

- **50M** for IDO
- **100M** for liquidity
- Reserves for growth

This ensures decentralization and alignment with holders.

Roadmap

- **Q4 2025:** Mainnet deployment, IDO launch.
- **Q1 2026:** DEX listings, staking activation, airdrop.
- **Q2 2026:** Community events, partnerships, liquidity locking.
- **Q3 2026:** NFT integration, ecosystem expansions.

Risks and Disclaimers

Investing in DRKT involves risks, including market volatility and smart contract issues. This is informational only. Conduct your own research (DYOR). The team is not liable for losses.
